STB Emulator Guidelines

Create your virtual device for JioStore STB Apps:

**To Open the AVD Manager > Start Android Studio**

1. Select Tools > AVD Manager

2. Click AVD Manager in the toolbar.

3. Click Create Virtual Device, at the bottom of the AVD Manager dialog.

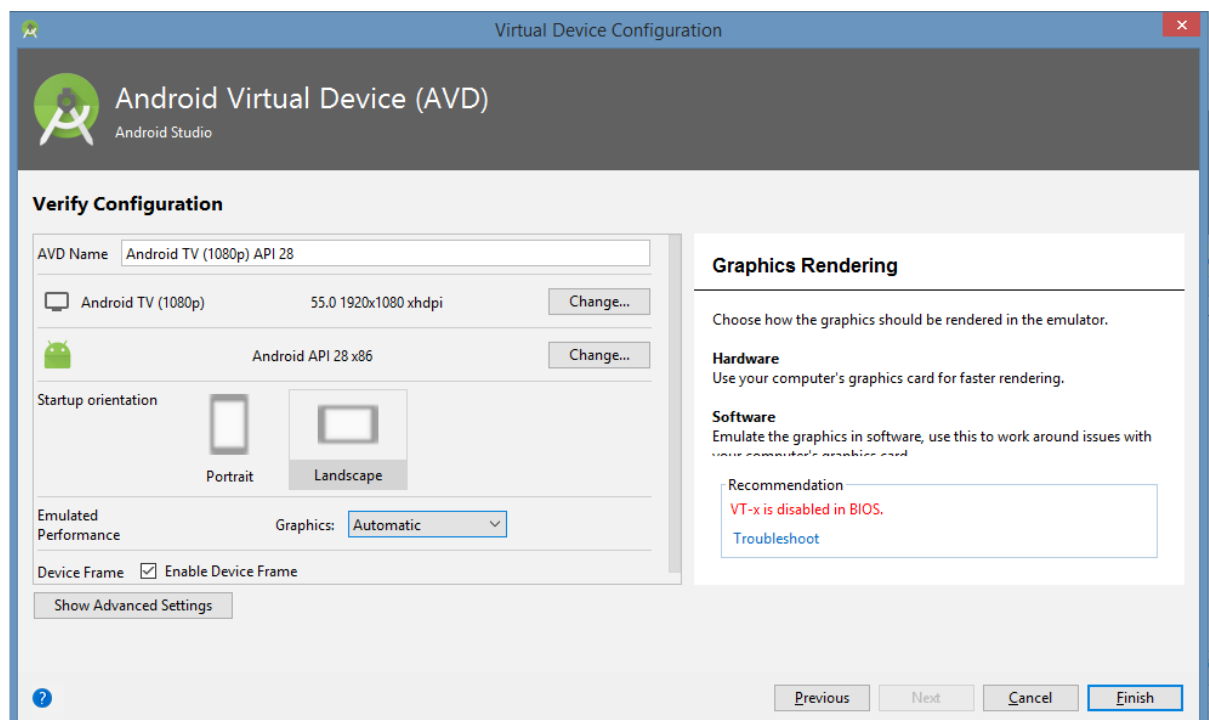

4. The Select Hardware page appears. Select TV with Hardware profiles that does not include Play Store.
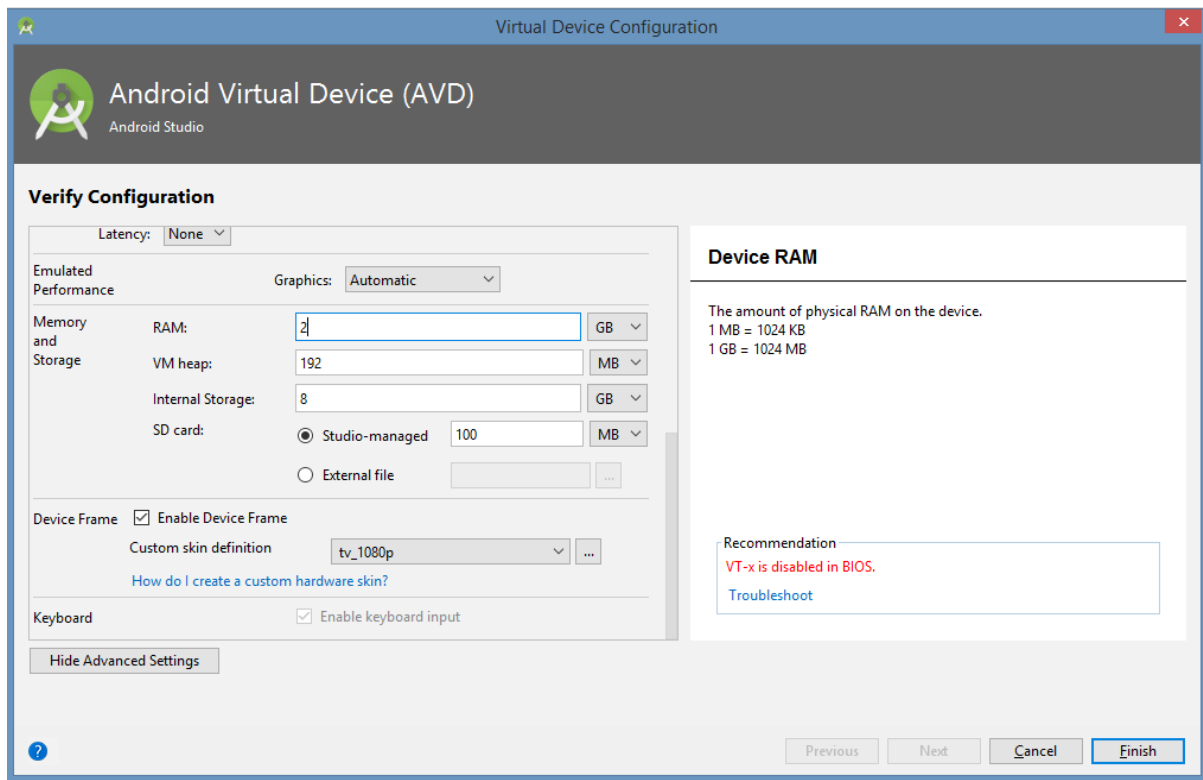

5. Select a hardware profile Android TV (1080p) with Resolution 1920x1080, and then click Next. If you don't see the hardware profile for Android Pie, you can create or import a hardware profile. The System Image page appears,

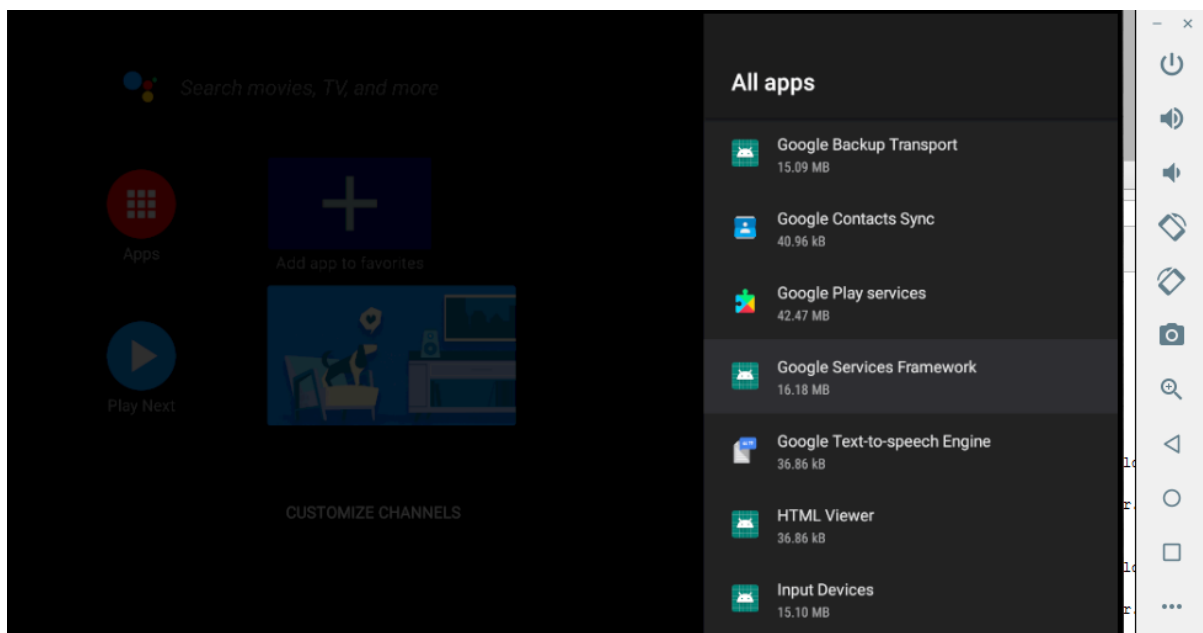

6. Change the AVD Properties as needed, and then click on Finish.

7. Below are the recommended setting the Advance configuration for STB emulator: RAM: 1 GB / 2 GB Internal Storage: 8 GB

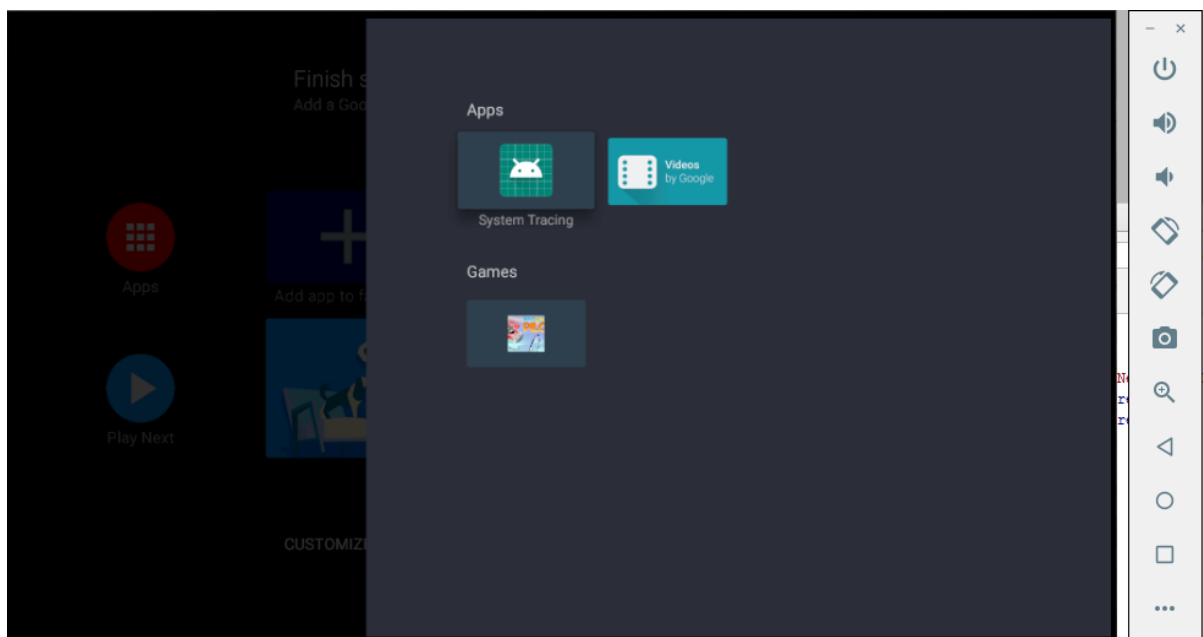

8. Click the Play icon under Actions and open the TV emulator. 9. Click Settings > Apps > Show all system Apps, Open "Google Play Service" and click on "Disable". Similarly, open "Google Services Framework" and click on "Disable".

9: To install apk on emulator, drag apk to emulator and go to app. Now start your apk to test game compatible to config emulator.

You are ready to test your app on the emulator.
